

MARKETING PERFORMANCE ANALYSIS

PROJECT OVERVIEW

A Power BI-based marketing analytics project focused on analysing campaign performance, customer engagement, marketing channel effectiveness, and key performance indicators through interactive data visualisation.

The project involved working with structured marketing data, understanding the available data fields, analysing performance metrics, and developing a multi-page Power BI dashboard to support marketing performance evaluation.

PROJECT FOCUS

Business Area: Marketing Analytics

Primary Tool: Microsoft Power BI

Analysis Type: Marketing Performance and Campaign Analytics

ANALYTICAL WORKFLOW

Raw Marketing Data

Business Insights

KEY ANALYTICAL AREAS

- Marketing campaign performance
- Customer engagement
- Marketing channel performance
- Conversion and response metrics
- Customer and campaign segmentation
- Key marketing performance indicators

DASHBOARD OUTPUT

The final Power BI dashboard consists of three analytical pages designed to provide a structured view of marketing performance and support data-driven interpretation.

TOOLS USED

Microsoft Power BI

SKILLS DEMONSTRATED

Data Understanding | Data Preparation | Data Modelling | Data Analysis | DAX | Data Visualization | Dashboard Development | KPI Analysis | Marketing Analytics

PROJECT OUTCOME

The project demonstrates the ability to transform structured marketing data into interactive Power BI dashboards that support the analysis of campaign performance, customer behaviour, and marketing effectiveness.
